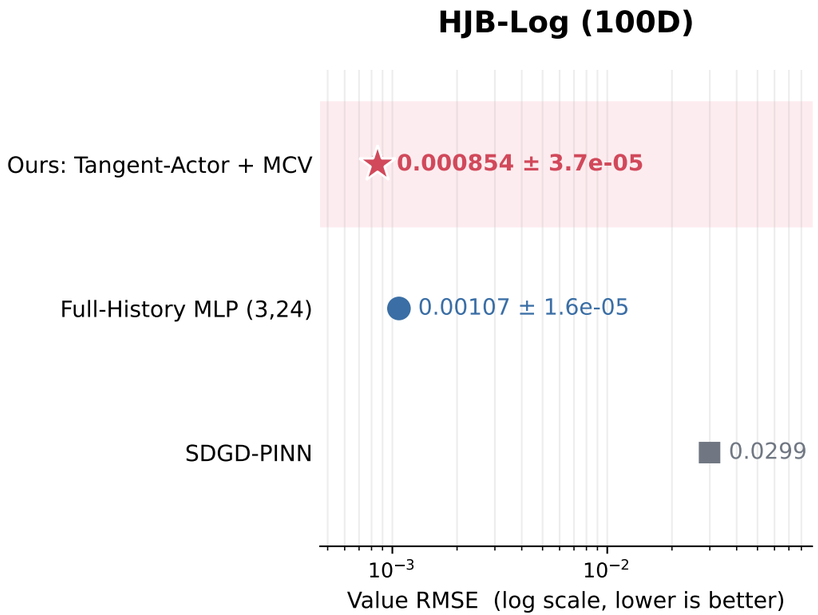
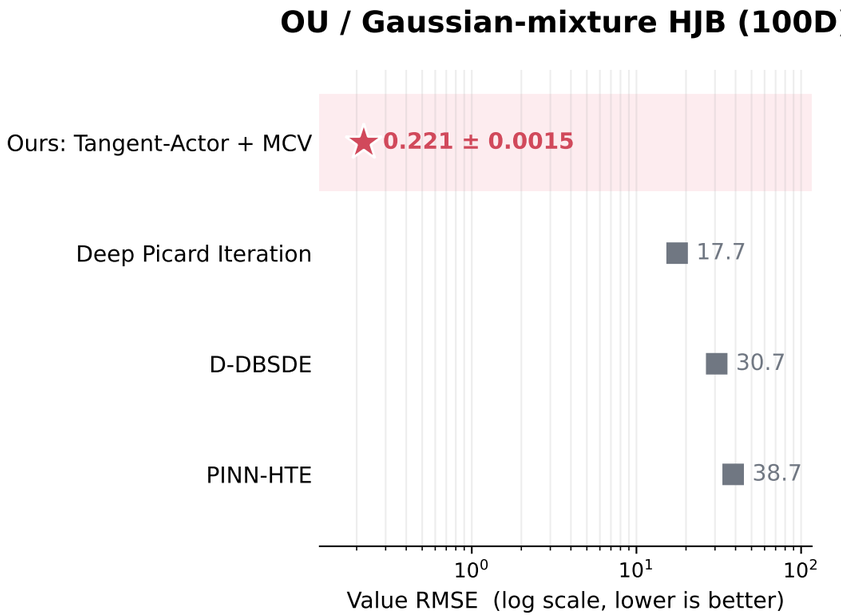
Value accuracy on original 100D PDE benchmarks

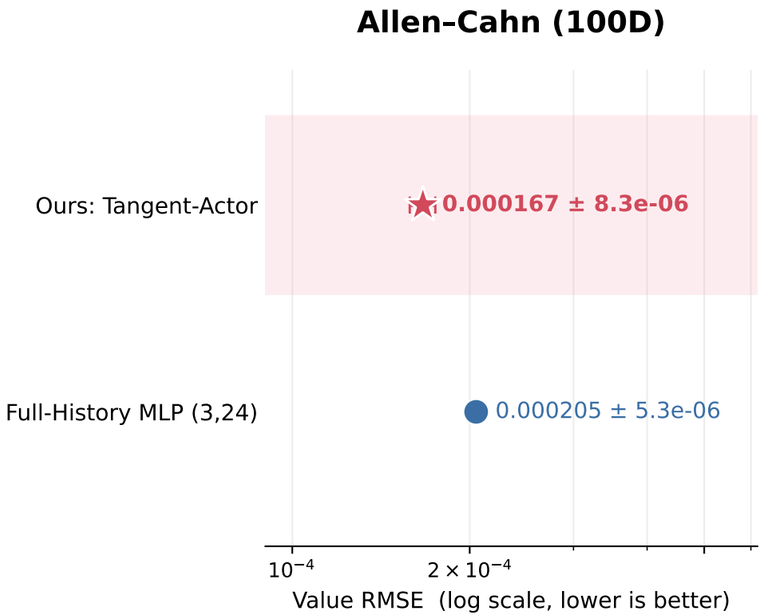
Held-out Value RMSE on matched states within each panel • farther left is more accurate



20.5% lower RMSE than Full-History
35.1× lower than SDGD-PINN



79.9× lower RMSE than Deep Picard
(best official neural baseline)



18.8% lower RMSE than Full-History
(reference-limited regime)

Error bars: sample SD over 3 seeds; official one-run neural baselines have none. Full-History: lowest-RMSE member of the frozen grid.
Deep BSDE is omitted because its published task is single-point estimation rather than function approximation.
